

**IN THE UNITED STATES PATENT AND TRADEMARK OFFICE**

Application Number: 10/029,073  
Confirmation No. 5295  
Filed: 20-DEC-2001  
Title: A METHOD FOR CREATING AND  
MAINTANING WORLDWIDE E-COMMERCE  
Inventor: John Almeida  
Examiner: M.T.T. Thein  
Art Unit: 3627  
Attorney Docket No. almeida073  
Customer No. 24221

**Declaration**  
**37 CFR §1. 131**

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Date: 10-MAR-2011

Sir:

The undersigned, John Almeida, hereby states that I am the applicant and inventor of the invention disclosed and claimed in U.S. Patent Application Number 10/029,073 and titled: "A method for creating and maintaining worldwide e-commerce." I refer to myself herein as "applicant."

Applicant states that and that this invention was reduced to practice prior to 31-JUL-2001 and applicant offers factual support to show that applicant was diligent in reducing the invention to practice from the date of conception and in preparing and filing the subject patent application.

---

---

I submit this declaration of prior invention under 37 CFR § 1.131 to predate Bodmer et al. (hereinafter Bodmer)(U.S. Pub. No. 2003/0093321) cited by examiner in rejecting applicant's claim under 35 U.S.C. 103(a). Bodmer was filed on 31-JUL-2001.

### **Proof of Prior Conception of the Invention**

I append a document in support of the statements made herein and as proof of such earlier conception of the invention prior to the effective date of the Bodmer reference coupled with due diligence from prior to said date to a subsequent reduction to practice and to the filing of the application. The document comprises scanned images of a witnessed notebook detailing the invention and dating the disclosure to 04-JAN-2001. Included on page 37 of 37 of the notebook are the signatures of five third-party witnesses, two of whose signatures are dated 20-JAN-2001.

The notebook comprises the invention disclosure and a first draft of applicant's patent application, which included the disclosure claimed in the subject patent application as further discussed below. This first draft was printed and glued one page each in a notebook and the witness signed the last page of the document.

In regard to the Bodmer reference, page 10 and page 15 of the notebook illustrates Bodmer's teachings also contained in the specification at paragraphs [0011] and [0136] – [0138] of applicant's published application. Illustrating this disclosure is Fig. 13 in the notebook (page 28), which is the same Fig. 15 of applicant's published application.

On page 10 of the notebook:

"Buyers on the other hand, need a solution where they can find a broad selection without having to go to many different e-shops to find what they're looking for and also be able to view the web pages in their own native language."

On page 15 of the notebook:

"So far we have explained a virtual e-mail where a single data base exists for all dynamic e-shops and one or more tables for the virtual ones. This is just one arrangement and as we'll see, the dynamic data base can be located in different server with the network or over the Internet or a combination of both. Fig. 13 shows four servers with a data base table, and for simplicity, we are showing only the table ID and they represent the tables of Fig. 8 for dynamic servers and Fig. 9 for virtual server. At Fig. 13 we have a virtual server 300 with a virtual table 302.

---

Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user. It should be noted that a single virtual table 302 is shown at virtual server 300 but it can be more than one table at the single server, or it can be, more than one table at more than one server."

In explanation, applicant's pending claim 308 is shown below and the related content from the above cited notebook paragraph that is pertinent to the claim element is italicized:

"Claim 308 . . . A program storage device readable by a server, tangibly embodying a program of instructions executable by the server to perform method steps for managing a plurality of content hosts on the same server or on other servers, said method steps comprising the steps of:"

NOTEBOOK: Page 15: "*So far we have explained a virtual e-mall where a single data base exists for all dynamic e-shops and one or more tables for the virtual ones. This is just one arrangement and as we'll see, the dynamic data base can be located in different server with the network or over the Internet or a combination of both.*"

"Claim 308 . . . retrieving a first dynamic content hosted by a first host wherein the first dynamic content is configured from a database table and wherein retrieving is performed by the server;"

NOTEBOOK: Page 15: "*Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312.*"

"Claim 308 . . . retrieving a second dynamic content hosted by a second host wherein the second dynamic content is configured from a database table and wherein retrieving is performed by the server;"

NOTEBOOK: Page 15: "*sends request and receives data 321 from Server B 320 which hosts E-MALL B 322.*"

"Claim 308 . . . presenting a third host to a user accessing the server wherein the third host displays the first dynamic content and the second dynamic content together as if the first dynamic content and the second dynamic content originated from the third host;"

---

NOTEBOOK: Page 15: *“Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user.”*

“Claim 308 . . . configuring the server to control the user’s interaction with the first dynamic content and the second dynamic content by causing the third host to retrieve the first dynamic content from the first host, and to retrieve the second dynamic content from the second host;”

NOTEBOOK: Page 15: *“Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user.”*

“Claim 308 . . . wherein said user interaction stays at the third host without redirecting the user to the first host, and wherein the user interaction with the second dynamic content stays at the third host without redirecting the user to the second host;”

NOTEBOOK: Page 10: *“Buyers on the other hand, need a solution where they can find a broad selection without having to go to many different e-shops to find what they’re looking for... ”*

“Claim 308 . . . configuring the server to control interfacing with the user accessing the first dynamic content and the second dynamic content through the third host; and,”

NOTEBOOK: Page 15: *“Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user.”*

---

"Claim 308 . . . configuring the server to maintain user interaction with the first dynamic content and the second dynamic content at the third host."

NOTEBOOK: Page 15: "*Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user.*"

**Diligent Efforts/Activities Toward Actual and Constructive Reduction to Practice of Application Number 10/029,073**

After the applicant conceived the invention on Jan-04-2001, applicant proceeded on a diligent path of actual reduction to practice of the invention by engaging in efforts of programming, debugging the invention, drafting iteratively improved versions of the application and culminating in the filing the subject application.

As the applicant proceeded, the applicant saved the work that was performed in CDROM (Compact Disk Read Only Memory) backup disks, which do not allow for changing the filing date or the substance of the work performed. Applicant submits the proof of such CDROM backup by providing a screen-shot of the file contents of each relevant backup for the specific time-period of the applicant's work-related to writing and revising the invention, and, programming and debugging of the same.

This affidavit is organized into two files, the first one is the notebook showing and proving prior conception of the invention and the second one comprising screen shots from the backup CDROMs comprising file indexes and each file respective date that the file content was last updated and saved.

Development of the invention comprised configuring server for testing; creating and updating databases and database tables; programming and testing electronic websites, shopping websites, shopping malls, plug-in shopping malls, user's navigation history tracking, automatic interface exchange of websites, automatic changing of websites based on user-provided interface settings and personalized websites. The testing

---

involved code-writing, code-debugging and automatic generation of electronic websites, shopping websites, shopping malls, plug-in shopping malls and user's navigation history tracking by uploading images, interfaces in HTML (Hyper Text Markup Language) with specialized tags; and adapting prior code to accommodate the invention.

**DILIGENT ACTIVITIES BY DATE**

Jan-04-2001: Conception of the invention and creation of the notebook.

Jan-04-2001 – Jan-20-2001: Working on the invention.

Continued drafting the first version of the application (notebook).

Jan-21-2001 – Feb-6-2001: Working on the invention.

Continuing with the drafting of the application by revising drawings and application (various Visio drawings with extension '.vsd') - index page 1.

Feb-7-2001 – Mar-20-2001: Reducing to practice.

Revised and adapted prior program code to enable the invention; acquiring, installing and configuring Microsoft SQL Server database software; acquired, installed and configured Microsoft Visual InterDev web-based development software platform; installed Microsoft Front page (admin.dll, author.dll, botinfo, bots and writeto) to enable development of web-based software application using Microsoft Visual InterDev. Installed Microsoft design tools and tested (dvwssr.dll). Tested Microsoft SQL Server database software and tested Microsoft Visual InterDev. Started testing the invention by creating database table structure related to the invention and software code modules (\_cate\_sub\_dep.doc, default.htm and others) – index page 2.

Tested prior software code for automatic shopping site generation (print\_inv\_sales.sts); upgraded database (2000\_CatalogProfile.mdb and 2000\_tbl\_Safe\_DB.mdb); upgraded prior software code to manage sales (buyer\_info.inc and buyer\_info\_rec.inc); programmed software module to manage credit card (ccapproval.inc,

---

ccapproval\_error.inc, ccardtypes.sts, ccdeclined\_error.inc, completesales.inc, creditcard.inc and creditcard\_info.inc); and upgraded interfacing software modules (dropdowns1list.inc, dropdowns2list.inc and dropdowns3list.inc) – index page 3.

March-21-2001 – March-30-2001: Reducing to practice.

Tested software modules relating to the management of automatic generation of shopping website (various files with extensions '.sts', '.asp', '.gif' and '.jpg'); performed further work on Microsoft Front Page (access, services and frontpg.lck – index page 5); Tested software module to manage the shopping catalogue (creating\_cat\_subcat\_dep.asp – index page 5) – index page 4-5.

March-31-2001 – April-8-2001: Reducing to practice.

Further tested the created software module by generating websites (various files with extensions '.asp', '.gif' and '.jpg') – index pages 6-7.

April-9-2001 – April-15-2001: Reducing to practice.

Further revised software module to manage the interface translation (translations\_1\_ITA.asp, translations\_1\_POR.asp and translations\_1\_SPA.asp) which in the application is under the title of "(II) ON-LINE INTERFACE TRANSLATION METHOD"; further revised software module for error management (empty\_cart.ENG, empty\_search.POR, dberror\_user.ENG and notice\_log\_in.inc); further revised software module for credit card management and invoicing (creditcard.inc and print\_inv\_bottom.asp) – index page 8;

April-16-2001 – April-17-2001: Reducing to practice.

---

Further tested the automatic generation of shopping websites and automatic interface plug-in exchange (various files with extensions '.sts', '.htm', '.tpt' and '.asp') – index page 9.

April-18-2001 – April-26-2001: Reducing to practice.

Further upgraded software modules to manage shopping cart (various files starting with 'itemsdisplay' and ending with the extension '.inc' and '.asp', main\_after.asp, main\_before.asp and main.asp – index page 10).

Further upgraded software modules for invoice and sales management (print\_inv\_body.inc, print\_inv\_bottom.inc, start.inc, after.asp, body\_control.asp, maininvoice.asp, completesales.asp and salesinfo.asp – index page 11).

April-27-2001 – April-30-2001: Reducing to practice.

Further upgraded and tested software modules for the management of the shopping catalog page, shopping cart and the receiving of credit cards (main\_before.asp, int\_main\_idx.inc, before.asp, main\_image.inc, main\_fullpicture.inc, main\_title.inc, after.asp, int\_scart\_body\_item\_totalprice.inc, int\_scart\_body\_image.inc, int\_scart\_body\_tax\_list.inc, button\_2bag.inc, int\_scart\_body\_bfr.inc, scart.asp, main.asp and default.asp) – index page 12.

May-1-2001 – May-2-2001: Reducing to practice.

Tested software modules relating to the management of automatic generation of shopping website (various files with extensions '.asp' and '.inc') – index page 13.

May-3-2001 – May-10-2001: Reducing to practice.

Further developed and tested website navigation and template uploading software modules (js\_show\_tree.inc, interface-eng.1.htm, interface-eng-2.htm and interface-.htm – page 14) which in the filed application is under the title of "III) TEMPLATE UPLOADING METHOD". Upgraded software module to manage navigation

---

(indexes\_sql\_text.inc – page 15). Further worked in the database by creating new tables and changing existing ones (2000\_CatalogPage\_DB.mdb – page 15).

On May-7- 2001 started development of the virtual shopping malls to integrate shopping, non-shopping websites and plug in sub-malls; which in the filed patent application is under the title of 'I) THE VIRTUAL NETWORK' for the filed application – index page 16.

May-11-2001 – May-14-2001: Reducing to practice.

Upgraded software module to manage user navigation in a virtual mall (shopusers.asp); developed the first software module to manage virtual plug-in malls (submalls.asp) which in the filed patent application is under the title of 'V) SATELLITE E-MALLS". Further tested the website development software module to automatic generate websites – index page 17.

On May 12, 2001 started development of the management for the plug in shopping mall – index page 18.

May-15-2001 – May-20-2001: Reducing to practice.

Further tested the website development software module to automatic generate websites (various files with extensions '.htm', '.gif' and '.jpg') – index page 19.

Upgraded prior software module for the management of file access and file creation (file\_functions.inc); upgraded database tables (UnoWebWorldwideSolutions.mdb); upgraded the template management software module (\_adm\_template.asp); programmed software modules to manage the inclusion of departments plug-in into shopping malls (submaldepartments.asp); upgraded software module to manage forms (complete\_shop\_forms.inc); upgraded software module to manage plug-in of sub-mall into shopping malls (submalls.asp); upgraded system library software module (vb.inc);

---

upgraded software module to publish website to remote server (\_publish.asp); further tested software modules to manage the generation of shopping sites – index page 20.

May-21-2001 – June-2-2001: Reducing to practice.

Tested prior developed software modules for managing the creation and update of shopping website (various files with extensions '.jpg' and '.gif'); tested software module in the basic language for inclusion in the invention (HelloWorld.bas); worked on the database (UnoWebWorldwideSolutions.mdb); tested third-party software modules for inclusion in the invention (GUESTOBOOK.EXE and GUESTBOOK.HTM) – index page 21.

June-3-2001 – June-21-2001: Reducing to practice.

Tested prior developed software code for managing the creation and update of shopping website (various files with extensions '.jpg', '.tpt' and '.gif') – index page 22-23.

June-22-2001 – July-2-2001: Reducing to practice and working on the invention.

Further tested the shopping site generation software modules; further tested interface software modules (interface-.htm and interface-eng-2.htm); modified the invention's drawings (\_pat-figure-2.vsd and \_pat-figure-17.vsd) – index page 24.

Further modified the invention's drawings (various files with '.vsd' extension); Further tested the shopping website generation (various files with '.gif' and '.jpg' extensions) – index page 25.

July-3-2001 – July-5-2001: Reducing to practice.

Further worked with software modules related to interfacing management (\_\_interface-.htm, \_\_interface-eng-1.htm and \_\_interface-eng-2.htm); further tested the shopping site generation software modules (various files with '.jpg' and '.gif' extensions) – index page 26.

July-6-2001 – July-14-2001: Reducing to practice.

Further tested the shopping site generation software modules by uploading images to shopping sites under testing (various files with '.jpg' and '.gif' extensions) – index page 27.

July-15-2001 – July-21-2001: Reducing to practice.

Started the development and testing of software modules to transmit e-mails from the system server to buyers and sellers e-mail accounts at remote servers (readimage.asp, SENDMAIL.ASP, SENDMAIL.HTM and other files with extensions '.inc' and '.htm') – index page 28.

July-22-2001 – July-24-2001: Reducing to practice.

Worked in the system software modules (global.asa and default.asp); worked on software modules for shopping cart management (descriptions.inc, body\_before.inc, product\_title.inc, qty\_title.inc, total\_price.inc and quantity.inc); developed software module to manage stores (stores.asp); further tested the developed software modules – index page 29.

July-25-2001 – July-26-2001: Reducing to practice.

Worked with software modules to manage the integration of interface plug-in (template\_program.inc, illegal\_interface.inc and illegal\_interface2.inc); worked with software modules related to locking of shopping websites and sales (completesales.inc, lockererror.asp, lockererror2.asp, dberror\_user.inc and storelocked.inc); upgraded error handling software modules (messages.inc and cookieerr.inc); upgraded software modules for the management of user log in (logged\_off.inc and logged\_on.inc) – index page 30.

July-27-2001 – July-28-2001: Reducing to practice.

---

Further tested prior developed and upgraded software modules to manage the automatic creation of shopping websites and template management (various files with extensions '.sts', '.asp', '.jpg' and '.gif') – index page 31.

July-29-2001 – August-2-2001: Reducing to practice.

Upgraded software modules for sales management (seller\_info.inc, seller\_id\_pw.asp and shopusers\_\_\_\_.asp); upgraded software modules for user log-in management (log\_in.asp and log\_in\_2.asp); upgraded system software modules and resource control management (js\_funcs\_svr.inc, adm\_js\_resource\_control.inc, js\_resource\_control2.inc and js\_resource\_control3.inc); upgraded software module for interfacing management (cat\_settings.asp and table\_navigation.class) on the filed application it is under the title “(IV) FILE WITH SETTINGS UPLOADING METHOD”; upgraded software module for the management of forms (adm\_for elements.inc) – index page 32.

August-3-2001 – August-15-2001: Reducing to practice and working on the invention.

Upgraded system and file management software modules (adojs.inc, adovbs.inc, file\_functions.inc, js\_array\_functions.inc, js\_funcs.inc, js\_funcs\_2.inc, js\_funcs\_svr.inc, js\_show\_tree.inc and vb.inc); upgraded software modules related to sales management (completesales.asp and salesinfo.inc); upgraded software modules for the management of shopping websites creation (shopscreation.inc and shop\_created.asp); upgraded software modules for plug-in interface management (template\_languages.inc, template\_search.inc and select\_bar.inc) – index page 33.

Worked on the intention's drawings and the application's disclosure (various files with extension '.vsd') – index page 34.

August-16-2001 – August-22-2001: Reducing to practice and worked on the invention.

---

Tested prior developed software modules by generating shopping sites (various files with extension '.asp' and '.tpt'); worked on the application's drawings (\_pat-figure-41.vsd and \_pat-figure-40.vsd) – index page 35.

August-22-2001 – August-28-2001: Reducing to practice and worked on the invention. Worked on the application's drawings and on the application's disclosure (\_pat-figure-2.vsd, \_pat-figure-24.vsd and \_patent - A Virtual Shopping Mall.doc); further tested the invention by generating shopping malls (various files with '.asp' extension) – index page 36.

August-29-2001 – August-30-2001: Reducing to practice.

Upgraded various software modules for interface management (html\_body.inc, main\_page.inc, services.inc and list.inc); upgraded software module for resources management (adm\_js\_resource\_control.inc, adm\_js\_resource\_control2.inc); upgraded software module for credit-card approval management (ccdeclined.inc); upgraded system and file management software modules (js\_funcs\_2\_\_\_\_.inc, js\_html\_class.class, adovbs.inc, adojs.inc and file\_functions.inc); upgraded software modules for template management (list.inc and template\_program.inc) – index page 37.

August-31-2001 – September-4-2001: Reducing to practice.

Tested prior software modules to generate and manage shopping malls various files with the '.asp' extension – index page 38.

Further tested shopping sites and upgraded forms and resources management software modules (adm\_for elements.inc, adm\_js\_resource\_control.inc, adm\_js\_resource\_control2.inc and adm\_js\_resource\_control3.inc); upgraded the shopping cart management software module (shopcart.asp, viewcart.asp, vieworder.asp and transact.asp); started development of software modules for security management

---

(unowebsecurities, EncrypDecrypt.cls, Securities.exp, Securities.lib, Securities.vbp, Securities.dll and Securities.vbw) – index page 39.

September-5-2001 – September-17-2001: Reducing to practice.

Further tested prior software modules for the creation and managing of shopping sites and template uploading, various files with the '.asp', '.inc' and '.gif' extensions – index page 40-41.

September-18-2001 – September-21-2001: Reducing to practices and working on the invention.

Further upgraded the system databases (UnoWebRouting\_Data.MDF, UnoWebSecurity\_Data.mdf, UnoWebWorldWideSolutions\_Data.MDF); worked on the invention's disclosure and drawings (\_pat-figure-31-a.vsd, \_pat-figure-7.vsd and \_patent – A Virtual Shopping Mall.doc) – index page 42.

September-22-2001 – October-16-2001: Reducing to practice and worked on the invention.

Worked on database tables (UnoWebRouting\_Data.MDF, UnoWebSecurity\_Data.MDF and UnoWebWorldWideSolutions\_Data.MDF – index page 43); worked on the application's drawings (various files with the extension '.vsd' – index page 44).

October-17-2001 – October-31-2001: Working on the invention and working on the analysis of the invention.

Performed further addition and revision throughout the application's disclosure; revised and wrote new claims, revised the abstract (\_patent – A Virtual Shopping Mall\_bak.doc and \_patent – A Virtual Shopping Mall.doc). Worked on analyzing the invention's internals, design and functionalities (\_\_Unoweb\_Presentation2.ppt and \_\_UnoWeb Worldwide Innovative.doc) – index page 45.

---

November-1-2001 – November-15-2001: Reducing to practice.

Further debugged prior developed software modules related to the automatic generation of electronic shopping malls and electronic shopping websites. Further tested the debugged software modules by generating various electronic shopping websites and electronic shopping malls (various files with extensions '.asp', '.gif', '.tmt', '.sts' and '.inc') – index page 46-50.

November-16-2001 – November-21-2001: Reducing to practice.

Upgraded software modules for the management of user login (log\_in\_2.asp and password.inc); upgraded software modules for the management of catalogue items deletion (delete.asp and delete2.asp); upgraded software module for the management of shop and error checking (notice\_shop.inc and reg\_dberror.asp); further tested the automatic generation of electronic shopping websites – index page 51.

Further tested the automatic generation of electronic shopping websites (various files with extensions '.jpg', '.inc', '.asp' and '.sts') – index page 52.

Developed software module to manage the tracking of user navigation on the virtual shopping mall (save\_surf\_list2.asp and surf\_list.inc) in the filed application it is under the title 'VI) SURF USER LIST'; tested prior software modules to create and manage shops, forms and templates (adm\_forlements.inc, deleteshops.asp, \_adm\_change.asp, \_adm\_template.asp and success.asp) – index page 53.

November-22-2001 – November-25-2001: Reducing to practice.

Developed software module to manage sales (notifyavailable.inc, update\_sales\_files.inc and int\_scart\_body\_aft.inc); upgraded software module to manage shopping stores (stores.asp); upgraded software module for the management of navigation (sqls.inc); upgraded software module for the management of templates (template\_program.inc) – index page 54.

November-26-2001 – December-12-2001: Reducing to practice.

Upgraded and tested prior software modules to create and manage shops presentation page and invoicing (frontcover.asp, html\_body\_print\_inv.inc, print\_inv.asp and print\_inv\_sales.sts – index page 55); upgraded software modules to manage the user registration and login (login\_thebuyer.asp, login\_thebuyer\_2.asp, logoff.asp, logon.asp, logonoff.inc and register\_buyer.asp – index page 55); upgraded database tables (\_UnoWebWorldWideSolutions\_Data.MDF – index page 56); further tested software modules for the automatic generation of websites and shopping sites(various files with exention '.jpg' – index page 56).

December-13-2001 – December-14-2001: Reducing to practice.

Upgraded software modules to manage forms, indexing and resources (adm\_formelements.inc, formelements.inc, adm\_js\_resourse\_control.inc, adm\_js\_resourse\_control2.inc, adm\_js\_resourse\_control3.inc, index.inc, index\_dd\_list.inc, index\_dept.inc, indexes\_sql\_text.inc and index2.inc); developed software module to manage shopping sites (admin-only.inc, all\_settings.inc, header\_image.inc and formelements.inc) – index page 57.

December-15-2001 – December-16-2001: Reducing to practice.

Upgraded software module to mange sales (thebuyer\_info.asp, transact.asp and vieworder.asp); upgraded software module to mange shopping cart ( viewcart.asp, int\_scart\_body\_checkbox.inc, int\_scart\_body\_image.inc, int\_scart\_body\_item\_choices.inc, int\_scart\_body\_item\_qty.inc, body\_item\_slr\_number.inc, int\_scart\_body\_item\_slr\_title.inc and int\_scart\_body\_item\_sys\_number.inc) – index page 58.

December-17-2001 – December-20-2001: Worked on the invention.

---

Finalized the application's drawings, the application's disclosure and the application's filing with the USPTO (various files for the figures with '.vsd' extensions and various files with '.doc' extensions for the application's disclosure) – index page 59.

As detailed above, applicant believes that the notebook provides a technical written description of all of the features of the subject invention. The above explanation provides the facts and specific passages applicant is relying on to show completion of the invention prior to the 31-JUL-2001 Bodmer reference date. The applicant started implementing the virtual part of the invention related to Bodmer on May-7-2001 and it is found on the explanation under the title of "May-3-2001 – May-10-2001: Reducing to practice." Although I am not an attorney, it is my understanding that this satisfies one of the requirements for a patent under patent law 35 U.S.C. § 112, first paragraph, relating to the written description requirement.

Applicant respectfully submits that since the date of the invention's conception predates the Bodmer reference filing date of 31-JUL-2001, and since applicant was diligent in reducing his invention to practice from the date of conception, Bodmer is not prior art with respect to applicant's invention.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application, or any patent issuing thereon.

Respectfully signed and submitted,

Signed: 10-MAR-2011

A handwritten signature in black ink, appearing to read 'J. Almeida', written over a horizontal line.

John Almeida

Inventor: John Almeida

Date: 01/04/2001

---

A method of a dynamic and virtual shopping network environment with dynamic Interface exchange that has objects with underlying Search Query Language (SQL) or references at links or form elements as means of guiding a server in creating new pages with automatic foreign language translation where products/services from a dynamic e-shop is virtually shared and sold by e-shops and e-shopping malls, and once a sales is performed its commission will be distributed among dynamic shopping mall; virtual shopping mall (if sold virtually) and the shopping network.

---

**THIS INVENTION IS THE PROPERTY OF: JOHN ALMEIDA AND ALL  
REVIEW AND DISCUSSION IS TO BE KEPT IN CONFIDENTIALITY**

A method of creating and updating dynamic and virtual e-mails and e-shop on a host computer from a client computer.

#### Abstract

A method of a dynamic and virtual shopping network environment with dynamic interface exchange that has objects with underlying Search Query Language (SQL) or references at links or form elements as means of guiding a server in creating new pages with automatic foreign language translation where products/services from a dynamic e-shop is virtually shared and sold by e-shops and e-shopping malls, and once a sales is performed its commission will be distributed among dynamic shopping mall; virtual shopping mall (if sold virtually) and the shopping network.

#### Claims

##### 1 claim:

1. A virtual electronic shopping network over the internet or over a network, with interface with underlying data objects, dynamic interface exchange and foreign language interface translation comprising of:
  - A) A client with a web browser capable of triggering queries written in Structures Query Language (SQL) where a client is connected with a server in an architecture so to make persistent communication with object requests with existing data base server at multiple locations over the internet or over a network;
  - B) A server capable of communicating with multiple servers over a network or over the Internet with capability of adding to or updating a virtual and a dynamic data bases tables.
    - a) A dynamic data base table at server with products' information;
    - b) A dynamic data base table at server with services' information;
    - c) A dynamic data base table at server with e-shops offering goods;
    - d) A dynamic data base table at server with e-mails offering goods;
    - e) A dynamic data base table at server with e-shops offering services;
    - f) A dynamic data base table at server with e-mails offering services;

- g) Virtual data base table with means of relating to the dynamic data base in a relational architecture as to allow it to create and update rows based on data objects from the dynamic data base table;
  - h) Virtual data base with means of retrieving data objects from the dynamic data by the use of SQL (Structured Query Language) text string as to allow it to create and update rows based on data objects from the dynamic data base table;
- C) Multiple virtual servers capable of communicating with multiple dynamic servers over a network or over the Internet with capability of adding to or updating a virtual and a dynamic data base tables.
- D) Multiple clients communicating with a server over a network or over the internet for the purpose of adding to or updating a virtual data base table with references to data base objects from the dynamic data base table;
- a) Clients receive data base objects from server and display their information and references at client's web browser as web page objects;
  - b) Clients select references of data base objects that are displayed by client's web browser with web page objects that refers to a dynamic data base table's objects at server;
  - c) Clients submit web page objects to server then the server uses these objects to update a virtual data base table;
- 2) A virtual electronic shopping network system defined in claim 1 with a dynamic data base;
- A) Dynamic data base located at a server;
  - B) Dynamic data base located at multiple servers at a network;
  - C) Dynamic data base located at multiple servers over the internet;
- 3) A virtual electronic shopping network system defined in claim 1 with a virtual data base;
- A) Virtual data base located at a server;
  - B) Virtual data base located at multiple servers in a network;
  - C) Virtual data base located at multiple servers over the internet;

- 4) A virtual electronic shopping network system defined in claim 1 with virtual and dynamic data base tables;
  - A) Virtual data base table with means of relating to the dynamic data base in a relational architecture as to allow it to create and update rows based on data objects from the dynamic data base table;
  - B) Virtual data base with means of retrieving data objects from the dynamic data by the use of SQL (Structured Query Language) text string as to allow it to create and update rows based on data objects from the dynamic data base table;
  - C) Virtual data base with means of relating to the dynamic data base table in a relational architecture as to allow it to create and update rows in conjunction with data from dynamic data base table;
- D) Dynamic data base with means of relating to the virtual data base table in a relational architecture as to allow it to retrieve data base objects from the virtual data base table;
- E) Dynamic data base with means of relating to the virtual data base in a relational architecture as to allow it to retrieve data objects from the virtual data base table and build SQL (Structured Query Language) text string with retrieved data base objects;
- F) Dynamic data base with means of relating to the virtual data base table in a relational architecture as to allow it to retrieve data objects from the virtual data base table, build a SQL (Structured Query Language) text string with retrieved data objects, combine said SQL text string with another SQL text string and form a single SQL query then query the dynamic table with said **query** and create a single virtual data base table from the dynamic data base table;
- G) A SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a data base table and said **query's** result will create a single data base table;
- H) A SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a dynamic data base table and said **query's** result will create a single virtual data base table;
- 5) A network setup of virtual and dynamic servers defined in claim 1 wherein a dynamic and a virtual server communicate;
  - A) The virtual server sends request for data base objects to a dynamic server;
  - B) The dynamic server returns requested data base objects to virtual server;
  - C) The virtual server receive its requested data base objects from dynamic server;

- D) The virtual server assembles received data base objects in a dynamic data base table;
- E) The virtual server assembles received data base objects in a dynamic data base table and relates it with virtual data base table in a relational architecture;
- F) The virtual server assembles received data base objects in a dynamic data base and relates it with virtual data base table in a relational architecture as to allow it to retrieve data base objects from the virtual data base table and build SQL (Structured Query Language) text string with retrieved data objects;
- I) The virtual server assembles received data base objects in a dynamic data base table and relates it with virtual data base in a relational architecture as to allow it to retrieve data base objects from the virtual table, build an SQL (Structured Query Language) text string with retrieved data objects, combine said SQL text string with another SQL text string and form a single SQL query then query the dynamic data base table with said query and create a single virtual data base table from the dynamic data base table;
- 6) Dynamic and virtual servers in a network setup defined in claim 5 wherein multiple dynamic servers communicate with a virtual server;
- 7) Dynamic and virtual servers in a network setup defined in claim 5 wherein multiple dynamic servers communicate with multiple virtual server;
- 8) An electronic virtual shopping network as defined in claim 1 having at least one dynamic e-mall:
  - A) A dynamic e-mall having at least one dynamic e-shop;
  - B) A dynamic e-mall having at least one virtual e-shop;
  - C) A dynamic e-mall having at least one virtual department;
  - D) A dynamic e-mall having at least one virtual category;
  - E) A dynamic e-mall having at least one virtual subcategory;
  - F) A dynamic e-mall having at least one virtual product;
- 9) An electronic virtual shopping network as defined in claim 1 having at least one dynamic e-mall and said e-mall having at least one dynamic e-shop;
  - A) A dynamic e-shop having at least one virtual e-shop;
  - B) A dynamic e-shop having at least one virtual department;

- C) A dynamic e- shop having at least one virtual category;
- D) A dynamic e- shop having at least one virtual subcategory;
- E) A dynamic e- shop having at least one virtual product;
- 10) An electronic virtual shopping network as defined in claim 9 with a plurality of dynamic e-malls and a plurality of dynamic e-shops.
- 11) An electronic virtual shopping network as defined in claim 1 wherein a plurality of servers share a single virtual data base;
- 12) An electronic virtual shopping network as defined in claim 1 wherein a plurality of servers share a plurality of virtual data bases;
- 13) An electronic virtual shopping network as defined in claim 1 wherein a single server shares a single virtual data base;
- 14) An electronic virtual shopping network as defined in claim 1 wherein a single server shares a plurality of virtual data bases;
- 15) An electronic virtual shopping network as defined in claim 1 wherein a plurality of servers share a single dynamic data base;
- 16) An electronic virtual shopping network as defined in claim 1 wherein a plurality of servers share a plurality of dynamic data bases;
- 17) An electronic virtual shopping network as defined in claim 1 wherein a single server shares a plurality of dynamic data bases;
- 18) An electronic virtual shopping network as defined in claim 1 wherein a single server shares a single dynamic data base;
- 19) An electronic virtual shopping network as defined in claim 1 wherein a client communicates with a server, transmits and server receives web page objects;
- J) Web page objects with **information** that refers to others web page objects and said **information** is transmitted to a server;
  - a) Objects are part of a link object;
  - b) Objects are part of multiple link objects;
  - c) Objects are part of a hidden form element;
  - d) Objects are part of multiple hidden form elements;

- e) Objects are part of a form element;
  - f) Objects are part of multiple form elements;
- K) Web page object with a SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a data base table and said **query**'s result will create a single data base table;
- L) Web page object with a SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a dynamic data base table and said **query**'s result will create a single virtual data base table;
- M) Web page object with a SQL (Structured Query Language) text string that represents a complete SQL text string to **query** a data base table and said **query**'s result will create a single data base table;
- N) Web page object with a SQL (Structured Query Language) text string that represents a complete SQL text string to **query** a dynamic data base table and said **query**'s result will create a single virtual data base table;
- 20) Web page objects as defined in claim 19 wherein **information** transmitted by client to server will be used to search a data base table;
- A) Said **information** is a key value that will be used to search a data base table's column at server, locate a matching value and retrieve a row;
- a) Retrieve a value from the returned data base table's column that represents the value to be used to create a SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a data base table and said **query**'s result will create a single data base table;
  - b) Retrieve a value from the returned data base table's column that represents the value to be used to create a SQL (Structured Query Language) text string to be used by the server to combine with another SQL text string and form a single SQL text string to **query** a dynamic data base table and said **query**'s result will create a single virtual data base table;
  - c) Retrieve a value from the returned data base table's column that represents the value of a complete SQL (Structured Query Language) text string to **query** a data base table and said **query**'s result will create a single data base table;
  - d) Retrieve a value from the returned data base table's column that represents the value of a complete SQL (Structured Query Language) text string to **query** a dynamic data base table and said **query**'s result will create a single virtual data base table;

- 21) An electronic virtual shopping network as defined in claim 1 wherein an user's information is used by the server;
- A) Said user's information is a combination of user's personal information;
  - B) Said user's information is a user's preference;
  - C) Said user's information are user's preferences;
  - D) Said user's information is user's provided partial SQL (Structured Query Language) text string;
  - E) Said user's information is user's provided complete SQL (Structured Query Language) text string;
- 22) A method of using user's information as defined in claim 1 wherein user's information will be used to create a SQL (Structured Query Language) text string to be combined at the server with another SQL text string and form a single one to **query** a data base table and said **query's** result will create a single data base table;
- 23) A method of using user's information as defined in claim 1 wherein user's information is as a SQL (Structured Query Language) text string and the server will use it to **query** a data base table and said **query's** result will create a single data base table;
- 24) An electronic virtual shopping network as defined in claim 1 with means of selecting a new foreign language at the client web browser which has its value at a web page object as **encoded information** references that represents the selected language, transmit it to sever, receive from server a new web page in the newly selected foreign language;
- A) Said **encoded information** is a key value that will be used as means to locate a data column that contains translated string values for the new selected foreign language;
  - B) A **translating function** with means to receive two parameters, one is the **encoded information** and the other is the value which is a is a key value that is used to search a data column, locate a matching value and retrieve another column which is the column that is a reference of the **encoded information** that contains the value of the translated string;
  - C) Means of inserting the **translating function** into a page that the server will transmit as web page object to the client that initiated the communication link and the returned result of the **translating function** will be a string value and it will be inserted in the page and it will be in client's selected foreign language;

- 25) An electronic virtual shopping network as defined in claim 1 with means of selecting a new foreign language at the client web browser, transmit the **encoded information** that represents the selected language to sever and the server will included said **encoded information** in a SQL (Structured Query Language) text string that will be combined with another SQL text string and form a single SQL text string to **query** a data base table and said **query's** result will create a single data base table that includes only data elements in the new selected foreign language;
- 26) An electronic virtual shopping network as defined in claim 1 with means of exchanging **web page interfaces template** on line;
- A) Said **web page interface template** will be uploaded by a user;
- B) Said **web page interface template** will be selected by a user from the shopping network server;
- 27) A method of exchanging web page interface template as defined in claim 26 wherein a user uploads multiple interface templates to the shopping network server and they will replace other templates already in use by user's e-mall or e-shop at the shopping network server;
- 28) A method of exchanging web page interface template as defined in claim 26 wherein a user uploads a single interface template to the shopping network server and the shopping network server will have a means to create multiple interface templates from the uploaded one and insert all necessary include files with correct paths for each web page template and replace each one that is already in use by the user's e-mal or e-shop at the shopping network server;
- 29) A method of exchanging web page interface template as defined in claim 26 wherein a user selects an interface template that is at the shopping network, the server will have means of copying the newly selected interface template files over an already existing user's e-mall or e-shop interface templates files at the shopping network server;
- 30) A method of exchanging web page interface template as defined in claim 26 wherein the web page interface template will reside at the shopping network server and at least in one other server in a network or over the internet for the purpose of presenting a single interface appearance received from multiple locations to a user's web browser at a single location;
- 31) An electronic virtual shopping network as defined in claim 1 wherein an e-mall or e-shop web pages interface are received from multiple locations and presented to a user's web browser at a single location;
- 32) An electronic virtual shopping network as defined in claim 1 wherein the web page interface template will reside at the shopping network server and at least in one other

server in a network or over the internet for the purpose of presenting a single interface appearance received from multiple locations to a user's web browser at a single location;

- 33) An electronic virtual shopping network as defined in claim 1 wherein the web page interface template will reside at multiple servers in a network or over the internet for the purpose of presenting a single interface from multiple locations to a user's web browser at a single location;

## BACKGROUND OF INVENTION

Today's e-commerce web sites, commonly called shop web sites henceforth called e-shop(s), are of a dynamic type with products and/or services that are available to a broad base of users. One good example of a dynamic e-shop is Amazon.com. One other type e-commerce setup is the e-shopping malls where dynamic e-shops are created and updated directly by a user and henceforth called e-mall(s). The two most popular are ViaWeb.com and BigStep.com. Stores in these e-malls are treated as independent dynamic e-shops with specific electronic addresses and their products/services are only available within their closed environment. Thus, products/services cannot be shared among other e-malls or e-shops even within their own network of dynamic e-shops at the e-mall.

The dynamic e-mall setup does enhance the shopping experience nor facilitate the interaction between buyer and seller. Since a buyer will have to move from e-shop to e-shop in the e-mall. Time is thus wasted and sales can be lost.

Current dynamic e-mall will not allow the creation of specialized e-shops that can sale their products/services in conjunction with products/services from others e-shops without having to manually place them in their e-mall or e-shops. Some e-shops and e-malls may offer placement of products/services from other e-shops, as already mentioned buyers are sent to a different e-shop once it's URL (address link) is selected, thus moving away from the original e-shop or e-mall.

Today's e-commerce requires solutions where seller can have their products/services available to a broad base of buyers and also virtually available to other e-shops and e-malls where they will be offered to a broader clientele base. For this to be possible, the creation and updating of e-malls and e-shops must be on line and easy of setup and use.

There is the need for virtual services as well with means to allow communication from client's user and the shop network server. Also means of passing a string with information that can be construed into an SQL (Structured Query Language) at the server.

Buyers on the other hand, need a solution where they can find a broad selection without having to go to many different e-shops to find what they're looking for and also be able to view the web pages in their own native language.

## FIELD OF THE INVENTION

The present invention relates to methods of creating and updating virtual e-malls and e-shops where users can initiate communication between a client computer with a web browser, create and update dynamic and virtual e-malls and e-shops at a server computer where a data base with products and services are maintained for all e-malls and e-shops, and in particular, a method to change e-malls and e-shops' interface template at any time, method of displaying templates in a selected foreign languages, method of searching the server data base based on a web page object.

## SUMMARY OF THE INVENTION

Is the objective of this invention to demonstrate a virtual electronic shopping mall where online users can create and update e-malls which offers the ability for others to create and update e-shops with products and/or services. It further will have the ability to change interfaces uploaded by a user or to select one already provided by the shop network (the host of the technology infrastructure). Interfaces will also have underlying reference to Structured Query Language (SQL) base on displayed objects. It further will have the ability to display more than one foreign language for both the e-malls and e-shops. All e-malls and e-shops are within a network where products and services can be shared among any e-mall or e-shop by making them virtual.

For instance, if an e-mall has an e-shop can sale their products by themselves or has other e-malls and e-shops in the network selling them virtually. The advantage of this e-shopping network environment is to make products and services available to a broader base for both seller and buyer.

The virtual e-shopping environment will enhance the way people shop electronically by making a wider selection of products and services available to any e-mall or e-shop part of the network. This will make it easier for sellers and buyer by having specialized e-shops and e-malls tailored to their unique requirements.

Once a sale occurs, a sale comission will be devided among participating parties accordingly and it will be based on if products/services are sold virtually or by respective owner. If sold by owner e-mall or e-shop carring products/services, the shopping network will keep one third of the sale comission and the e-mall will have the remaining. If products/services are sold by a virtual e-mall, the sales commission will be split evenly among the shopping network, the e-mall carring products/services and the virtual e-mall where sales were performed.

Services will be shared virtually as well. Since objects on the web page interface will have an underlying reference to a SQL at the server as to allow new pages to be generated based on the displayed service, thus allowing a page with products to be displayed based on the service offered. For instance, an article about a particular good is viewed by a user. If the user clicks on a link or any other means that will send it to the server. The server will then generate a new page of products or more services. If a sales is performed based on previously selected services then the sales commission will also be divided among all parties including the one who provided the service.

## DETAILED DESCRIPTION OF THE INVENTION

The present invention now will be described more fully hereinafter with reference to the accompanying drawings, in which preferred embodiments of the invention are shown. This invention may, however, be embodied in many different forms and should not be construed as limited to the embodiments set forth herein. Rather, these embodiments are provided so that this disclosure will be thorough and complete, and will fully convey the scope of the invention to those skilled in the art. Like numbers refer to like elements throughout.

As will be appreciated by one of skill in the art, the present invention may be embodied as a method, a virtual e-shopping network, or a computer program product. Accordingly, the present invention may take a form of an entirely software embodiment or an embodiment combining software and hardware. Furthermore, the present invention may take the form of a computer program product on a computer-readable storage medium having computer-readable program code means embodied in the medium. Any computer readable medium may be utilized including hard disks, CD-ROMs, optical storage devices, or magnetic devices.

As is understood by those skilled in the art of Web client/server communications, a user access a server by establishing a connection between client and server(TCP). In the majority of cases, client and server communicate by using HTTP protocol over a TCP connection. The data transfers between client and server are HTTP objects(e.g HTML data objects).

Fig. 1 is the representation of a dynamic e-shop with departments and each department having a category, a category having a subcategory and the subcategory having products. It should be noted that a department can have one or more categories and a category can have more than one subcategories. A dynamic e-shop is an individual web site and it may or may not share resources with other dynamic web sites at the server.

Fig. 2 is a further embodiment that includes an e-mall with three e-shops (e-shop a, e-shop b and e-shop c). The difference of a dynamic e-mall and a virtual one is that a dynamic e-mall is just a group of one or more e-shops. On the other hand, a virtual e-mall can have

one or more e-malls and each having one or more e-shops sharing each other services, dynamically and/or virtually.

Fig. 3 is an overview of a virtual e-mall where four e-malls coexist each having their e-shops and each e-shop able to share resources with other e-shops and e-malls in the shopping network. For instance E-SHOP A-3 104 at E-MALL A 100 will be able to share its resources with E-SHOP B-1 115 at E-MALL B 101; with E-SHOP D-1 107 at E-MALL D 102; with E-SHOP C-1 112 at E-MALL C 103. This is just one example and those skilled in the art will be able to further expand it.

Fig. 4 is a further embodiment of Fig. 3 and virtual e-shops are now included making a dynamic e-shop into a virtual one by placing them at others e-malls within the e-shopping network environment. Dynamic E-SHOP A-3 104 is now virtual to E-MALL B 120; dynamic E-SHOP B-3 113 is now virtual to E-MALL C 121; dynamic E-SHOP D-2 108 is now virtual to E-MALL C 123 and E-MALL A 124, and dynamic E-SHOP D-3 109 is virtual to E-MALL C 122.

Fig. 5 is a further embodiment of Fig. 4 with virtual e-shops included. As we see, E-SHOP A-3 104 is dynamic at E-MALL A 100 and virtual 120 at E-MALL B 101; E-SHOP B-3 113 is dynamic at E-MALL B-3 101 and virtual 121 at E-MALL C 103; E-SHOP D-3 109 and virtual 122 at E-MALL C 103, and E-SHOP D-2 108 is dynamic at E-MALL D 102 and virtual 123 at E-MALL C 103, and E-SHOP D-2 108 is dynamic at E-MALL D 102 and virtual 124 at E-MALL A 100. As described a dynamic e-shop becomes a virtual one by being shared by others in the shopping network. For instance, if a buyer is accessing E-MALL A 100, he/she will have all dynamic e-shops (E-SHOP A-1 106, E-SHOP A-2 105 and E-SHOP A-3 104) and the virtual E-SHOP D-2 124 as well. The same is true for E-MALL D 102 which has E-SHOP A-1 134 now available as a virtual one from E-MALL A 100.

Fig. 6 Shows dynamic departments, categories, subcategories and products within individual e-shops, as we will see, they will also become virtual ones like we've seen with the e-shops. Department, category, subcategory and products are dynamic at E-SHOP A-2 105 at E-MALL A 100 and the same is true with E-SHOP C-2 111 at E-MALL C 103; E-SHOP B-1 115 and E-SHOP B-3 113 both are dynamic at E-MALL B 101. For sake of simplicity only one department with one category and one subcategory is shown. Although, more than one department can exist and the same applies to category and subcategory.

Fig. 7 is a further embodiment of Fig. 6 and making dynamic departments, categories, subcategories, products and e-shops virtual. As shown, E-SHOP A-2's 105 Department A-2, Category A-2 and Subcategory A-2 150 are now virtual 150 at E-MALL C 103. E-SHOP C-2's 111 Product C-2-1; Product C-2-2 and Product C-2-3 are now virtual 151 at E-MALL A 100; E-SHOP A-2 105 is virtual 153 at E-MALL B 101; E-SHOP B-3 113 is virtual 152 at E-MALL C 103 and E-SHOP B-1 115 is virtual 154 at E-SHOP B-3 113. As it can be seen, dynamic e-malls and e-shops can have any combination of e-shops, departments, category, subcategory and products virtually.

Before we start our discussion of dynamic data base table of Fig. 8 and virtual table of Fig. 9, lets first review each one of them. The dynamic data base table of Fig. 8 is where all data base fields with information about all e-malls and e-shops are store and henceforth called data base objects. Virtual data base table of Fig. 9 is where data objects that represents the references about the virtual part of the shopping network and they refers to the dynamic data base table of Fig. 8.

Fig. 8 shows a data base table for a dynamic configuration of Fig. 6. Lets go back to Fig. 6 and explain E-SHOP A-2 105. As shown Department A-2 140, Category A-2 141, Subcategory A-2 142, Product A-2-1 143, Product A-2-2 144 and Product A-2-3 145 are part of E-SHOP A-2 105 and it is located at E-MALL A 100. The first three rows (1,2 and 3 of ID column) of the dynamic data base table of Fig. 8 shows E-Shop A-2 for *Shop\_Name* and it represents the E-SHOP A-2 105 (Fig. 6); E-Mall A for *Mall\_Name* and it represents E-MALL A 100 (Fig. 6); Category A-2 for *Category* and it represents Category A-2 142 (Fig. 6); Subcategory A-2 for *Subcategory* and it represents Subcategory A-2 (Fig. 6); Product A-2-1, Product A-2-2 and Product A-2-3 for *Product\_ID* and they represents Product A-2-1 143, Product A-2-2 144 and Product A-2-3 145 (Fig. 6). Anyone skilled in the art will be able to follow the remaining rows of the table at Fig. 8 and the diagram of Fig.6.

Fig. 9 shows a data base table for the virtual part of Fig. 7 and as we've done with Fig. 8 we'll explain the first three rows (1,2 and 3 of ID column). E-Mall A for *Virtual\_Mall* represents the e-mall that virtually receiving products/services from other e-shops and it represents E-MALL A 100 of Fig. 7. Product for *Type* represents products from Fig. 7 151 and finally the names of the virtual products at *Virtual\_Type\_Name* wich represents the products at Fig. 7. It is also clear that Shop, Department, Category and Subcategory for *Type* indicates their respective dynamic types at Fig. 7. Anyone skilled in the art will be able to follow the remaining rows of the table at Fig. 9 and the diagram of Fig. 7.

It should be noted that dynamic data base table of Fig. 8 and virtual data base table of Fig. 9 can have some kind of relation, althow not shown. Also, anyone skilled in the art will be able to use both tables and formulate SQLs to create queries that will reflect a single resultant table. The SQL to retrieve a single resultant table will be a combination of SQL text string that represents dynamic table (Fig. 8) and retrieved data base objects from the virtual table (Fig.9), as to formulate a single SQL text string to be retrieve a single table from the dynamic data base table of FIG. 8.

Accordingly, if a search is performed at the dynamic E-SHOP B-3 101 (Fig. 7 and Fig. 8) which has a virtual E-SHOP B-1 115 (Fig. 7) and it is shown at the virtual table of Fig. 9. The query will first retrieve its data from the dynamic table Fig. 8 and from the virtual table (Fig. 9). Here is a SQL to perform such query.

---

```
SELECT * FROM DynamicTable WHERE Mall_Name='E-MALL B' OR
Shop_Name='E-SHOP A-2'
```

First, we'll retrieve all data for E-MALL B 101 (7,8 and 9 of ID column) and the remaining portion of the query (OR Shop\_Name='E-SHOP A-2') comes from the virtual table row 4 of ID column (Fig. 9). Now that we have information for the virtual part, we'll use it and retrieve rows 1,2 and 3 of ID column (Fig. 8). The same is true for all other values of the table field (Type). All that needs to be done is add a second clause to query.

It should be noted that a single table is shown in Fig. 9 but it can be more than one table and also have different arrangement than the one just presented. It is also clear that anyone skilled in the art will be able to use the explanation given to virtually create SQL queries based on user's profile, behaviour or preferences, thus treating users the same way virtual e-shops are treated. For example, a user view a web page of a product from specific e-shop. Since the information about the e-shop, department, category, subcategory and the product are available, a profile can be built and next time user return to any e-shop or e-mail in the network, previously visited e-shops or any other combination can be presented virtually to the user as well.

Usually, web pages displayed by a web browser at a client's computer is made of one or more web page objects transmitted from server to client in the HTML format and over a TCP connection. These objects can be an image, a banner, text, audio and video, form elements, links etc. As we've shown at the dynamic table at Fig. 8. If we look at table's column Product\_ID, we see only the catalog product's ID, and it is shown as is for the purpose of simplifying our discussion. This table can be expanded and include the product's title, description, image etc. Fig. 10 we show the actual interface objects, and they represent the catalog product's page. It can also represent a service page as well.

Fig. 11 is a further embodiment of Fig. 10 with links object included, and if any one of them is selected its information will be sent to server and at the server a query will be performed at the table of Fig. 12, a data base table that has information about each object SQL syntaxes to be used to create the second part of the SQL and thus make it part of the virtual search. Let's say the selected object is the link for the banner (Fig. 11) which has *<a href="newPage.asp?SQLKey=bnr001">Banner.gif</a>* this information will be sent to server and the ASP (Active Server Page) page will retrieve and the information **bnr001** from **SQLKey** and search column **SQL\_Code** and retrieve **Shop\_Name='E-SHOP B-3'** from column **SQL\_Text** of Fig. 12. Following, we'll include this new text into our previous SQL expression and have a new one.

---

```
SELECT * FROM DynamicTable WHERE Mall_Name='E-MALL B' OR
Shop_Name='E-SHOP A-2' OR Shop_Name='E-SHOP B-3'
```

---

As we've seen, page objects will expand the user virtual experience by offering more products and services combining them with the dynamics and virtuals ones.

It should be noted that instead of links as shown at Fig. 11 to transmit the encoded information to server, form elements can be used. Also, a complete SQL (Structured Query Language) syntax can be encoded at links and form element as well. Further, the SQL\_Text column at the data base table of Fig. 12 can contain a complete SQL (Structured Query Language) syntax.

So far we have explained a virtual e-mail where a single data base exists for all dynamic e-shops and one or more tables for the virtual ones. This is just one arrangement and as we'll see, the dynamic data base can be located in different server with the network or over the Internet or a combination of both. Fig. 13 shows four servers with a data base table, and for simplicity, we are showing only the table ID and they represent the tables of Fig. 8 for dynamic servers and Fig. 9 for virtual server. At Fig. 13 we have a virtual server 300 with a virtual table 302. Virtual server 300 sends request and receives data 311 from dynamic Server A 310 which hosts E-MALL A 312; sends request and receives data 321 from Server B 320 which hosts E-MALL B 322, and sends request and receives data 331 from Server C 330 which hosts E-MALL C 332. Once requests are sent and data received from different servers in the network or over the Internet, they can be combined with the virtual table 302 at virtual server 300 and then a single table presented to user. It should be noted that a single virtual table 302 is shown at virtual server 300 but it can be more than one table at the single server, or it can be, more than one table at more than one server.

As we've explained, each page has objects including text objects. Since the virtual e-mail will be used worldwide, it must also be able to display these text objects in the user's own native language. Including the translation of products/services and the e-shop and e-mail's interface. First, let's explore the page interface translation then we'll explain the page objects translation and finally how they will enhance the virtual shopping experience. We'll be using ASP (Active Server Page) technology along with JavaScript language for our explanation since they are frequently used on the Internet for programming clients (web browsers) and servers as well. Fig. 14 shows a table with three columns: Phrase\_Code, ENG and POR. Fig. 15 shows two parts of a drop down form object and Fig. 16 the actual HTML code for the drop down form object of FIG. 15. Let's explore the drop down form object. It has two parts and they are the element that is hidden from the user and the element that the user uses to change its state (make a selection). The table of Fig. 15 has two columns, the first column represents the hidden part that is used by the browser to send the user's selection to server. The second column shows the drop down choices that the user will use to make a selection. As we further explore, Fig. 16 is just the code to reflect what is shown at Fig. 15. Back to Fig. 16. The line `<form name=changelanguage action=newlanguage.asp>` indicates the start of a form object and `</form>` the end of it. The line `<select name=language onChange=changeLanguage()>` indicates the start of a drop down object and `</select>` the end of it. The line `<option value=ENG>English</option>` indicates the first option and `<option`

`value=POR>Portuguese</option>` indicates the second option. The values shown to the user are in **English** and **Portuguese**. Lets say that the drop down has the option **English** as the selected one and the user now change it to **Portuguese**. Three things will happen. First, the browser will transfer control to *function changeLanguage()* and it will submit the form to server, and the server will retrieve *newlanguage.asp* and pass **POR** as a parameter and that represents the user's selection. Fig. 17 shows the *newlanguage.asp* with a JavaScript program on both client and server. The first line *Var Language=Request.Form("language")*; requests the drop down user's selection from server that was passed to it by the client computer (web browser) and the variable *sLanguage* will now have the value **POR**. Next we have a function called *doTranslate(sPhaseCode,sChosenLanguage)* which has two parameters *sPhaseCode* and *sChosenLanguage*. The first parameter *sPhaseCode* will be the value of the code to be used to search column **Phrase\_Code** of languageTable Fig. 14. The second parameter *sChosenLanguage* will be the user's selected language (the value at the variable *sLanguage* that is **POR**). Now the function *doTranslate()* will open a data base and Record Set connection and perform a query at the **languageTable** and return a value from a row that represents the result of the SQL query. The next set of code of Fig. 17 is a partial HTML code within the ASP page and it includes the action drop down and the ASP code inserted in it. Now we see two lines with *Response.Write()*. The first (`<% Response.Write(doTranslate("ENGL", sLanguage)) %>`) one will create a translated element for the drop down that says **Inglês** and the second one (`<% Response.Write(doTranslate("PORT", sLanguage)) %>`) will say **Português**. As we've mentioned, the received value is **POR** and it is stored at the variable *sLanguage*. The first *Response.Write()* which uses the value of *doTranslate("ENGL", sLanguage)*. This function will search languageTable (Fig. 14) for ENGL and return the value of column **POR** because it is the column that represents the user chosen language. The same is true for the second *Response.Write()*. By giving these examples we're showing how to translate the interface's based on a data base table with the passed parameter from a drop down at the client's computer. And by using the hidden drop down element's value as a key to search the data base table at the server computer's ASP page.

Now that we know how the interface gets translated, we'll go one step further and translate the actual page text objects and see how it relates to the virtual e-mails and e-shops. Fig. 14a is a table data base table with two rows. The first row we have **Product A-2-1** that has a title in Portuguese **Título do Produto A-2-1**. We know it because the value **POR** for the column **Language** indicated that (see Fig. 15). The product of the second row is in English **Product A-2-2 Title** and it is indicated by the value **ENG** at the column **Language**. Now lets say that the user views a e-shop selects a language other than the one displayed by the web browser on the client computer screen. The new screen will show the new selected language and also all text objects will be translated in accordance with the new selected language. This will affect the new virtual e-mail or e-shop, since some products (products) and services may be in a different language than the new selected one. Following is a more complete SQL from our previous example and it will now include the new query with the user's new selected language. Fig. 18 is the same

table of Fig.8 except we've removed the **Product\_ID** column and added a new column **Language** to reflect our next SQL.

---

```
SELECT * FROM DynamicTable WHERE Language='POR' AND (Mall_Name='E-MALL B' OR Shop_Name='E-SHOP A-2' OR Shop_Name='E-SHOP B-3')
```

---

As we've seen, the user's selected language will change the virtual e-mails and e-shops by changing the number of good/services that will be available. It should be noted that the function `doTranslate()` is a very basic function and in an actual program it would use other means for retrieving information instead of opening and closing data base tables and record sets, and it was presented as is for simplicity.

As said before, client computers communicate with a server computer over an Internet connection (TCP connection) and client sends requests to server then the server sends objects in the HTML format back to client. These objects are then displayed in the client computer as web pages. Fig. 19 show this setup where client 160 sends request 161 to server 162 and server 162 retrieves an ASP page and include files as needed 163 and sends it back to HTML 164 to client 160.

Lets explore the above explanation further. A true virtual e-mail or e-shop will also need means for the user to change its interface without having to access the server computer that hosts them. Fig. 20 show an ASP page template divided into four parts. The first part 170 is where variable are created and all data base connections opened for the the ASP page. After all connections are open, indexes representing links to products/services at the e-mail or e-shop are created 172. After a link is selected, a new page with the good/service information is received 171. And finally, before leaving the page we need to release all opened connection at the server to free resource that are no longer needed.

As we've seen in Fig. 19, an ASP page has includes files and they can be a complete new program in any acceptable ASP language. These includes files are executed by the server and the results inserted into the new file then transmitted to the requesting computer (client) in the HTML format. Fig. 21 show the same template from Fig. 20 with the include files tags interted in them.

Once we have a standard ASP template format, we can exchange them in and out without affecting the include files. All that we will needed to do is to create a new template with a new look and insert the include files and a new web page will be created based on the same set of include files. Also, changes are needed, we can make the changes directly to the include file without affecting the remaining includes or the interface templates. Since we are creating virtual e-mails and e-shops and the user may be in a different city or even in a different country, the user will need means to exchange interfaces without physical

access to the hosting server. There will be situations where a web site already exists and the need for a mechanism to offer products for sales. There will also be cases where, there is a web site and nothing to sell but desires to sell others products virtually.

In any of the above cases, there will be a need to exchange the web site's interface and it may be the same one already in use by the web, or, it may be an interface supplied by the hosting server. Fig. 22 shows how to replace an interface. The top part 190 in the old interface and the bottom part is the new one 191. An interface can be uploaded by the user or one can be selected from the virtual server computer 192. The new interface 191 will then replace 193 the old interface 190.

It should be understood that folder's structure means a group of files structured in a way that starting from the ROOT, new folders are added to it and files added to a folder, this is also called directory structure and henceforth called folder. A folder can have other folders added to them and files, on the other hand, cannot. A good example is a file cabinet where the file cabinet itself is like the root; drawers are like folders and files within a drawer is like files within a folder. Fig. 23 shows two ASP templates. The first one 200 has a folder's path added to each include file `<!-- #include file="ShopCart/before.inc" -->` (ShopCart) and the second one 201 has a different path `<!-- #include file="ShopPage/before.inc" -->` (ShopPage). The folder's path as part of the include file tells the server where the include files are located. For example `<!-- #include file="ShopPage/before.inc" -->` tells the server that **before.inc** is located in the folder **ShopPage**.

Fig. 24 shows a folder's structure that we've discussed and also includes a new folder **Templates 204** where templates are saved. Let's further explore this folder structure. ShopCart 202 is where the include files for template 200 (Fig. 23) are stored; ShopPage 203 is where the include files for template 201 (Fig. 23) are stored and Templates 204 is where the templates 200 and 201 (Fig. 23) are stored. Now let's delve into folder Templates 204. As we see, file ShopCart.asp 205 is the same template 200 (Fig. 23) and ShopPage.asp is the same template 201 (Fig. 23). It is now clear that all that needs to be done to change the e-mail or e-shop interface is to upload new templates with their respective include files' path at the include tag into the Template folder 204. It should be noted that a single ASP template can be uploaded and have a program in the server to create other with the correct path in each one of them. Any link reference within an ASP file in the Template folder 204 will mostly refer to another template file that is present in it. We've shown a very simple folders structure with only three folders, in reality a folder structured can have a great number of folder and a folder have a great number of files. For the sake of simplicity we've shown it with ROOT at the beginning, it can be an e-mail or e-shop's name or any other name as well.

Fig. 25 shows a setup where a client computer with a web browser 213 receives data from servers. Virtual Server 215 and Host Server 214. Let's start with Virtual Server 215 where the virtual network is hosted. It will have a folder structured similar to the one we've

19/37

presented at Fig. 24 and the ROOT will be substituted for the name of an e-mall or e-shop. Host Server 214 uploads a set of templates 210 to Virtual Server 215. When the web site is first accessed, Client 213 will make a request from Host Server 214 through a connection 211 and receive a web page interface. Upon selecting any link that refer to a shopping environment. Client 213 will request the next set of interfaces from Virtual Server 215 through connection 212. From this point on, the new interface will be supplied by Virtual Server 215 and it will be the same interface that is located at the host computer 214. The user at the Client 213 will not notice that that the web site in view is coming from two different servers. Host Server 214 is where one or more web sites are hosted and it can be more than one server. Virtual Server 215 is where the shopping environment along with interfaces from web sites at Host Computers are hosted.

In our examples we've shown that any dynamic e-mall or e-shop can be virtual. It should also be noted that a dynamic e-mall does not need to have any dynamic e-shop as part of it. It should be understood that a dynamic e-mall can also be a totally virtual e-mall.

While the present invention has been described in connection with the illustrated embodiments, it will be appreciated and understood that modifications may be made without departing from the true spirit and scope of the invention.
